Summary:

Here are the key points and relevant details from the text: **Main Features:** * Login screen with username/password fields * Product catalog with names, prices, and add-to-cart options * Shopping cart view for added products * Checkout page with customer info form * Order confirmation screen after payment **User Actions:** * Login with valid or invalid credentials * Add multiple products to the cart * Remove items from the cart * Fill out checkout information * Submit and complete the order **Edge Cases:** * Empty cart checkout * Invalid ZIP code in checkout form * Network failure during order submission **Credentials for Testing:** * Username: standard_user * Password: secret_sauce.

Suggested Test Cases:

1. - Search for products by name
2. - Filter products by category
3. - Verify product information (name, price, images)
4. - Add multiple products to the cart
5. - Verify added products are displayed correctly
6. - Verify total price and quantity of products
7. - Fill out customer information form with valid data
8. - Fill out customer information form with invalid data (e.g., missing fields, incorrect format)
9. - Verify that required fields are highlighted as errors
10. - Verify order details (date, total, products)
11. - Verify order status (e.g., "Order placed successfully")
